

From the Press Room:

TelePhoto Technologies Inc proudly introduces the VIP Race Graphics System.

TelePhoto Technologies Inc is excited to announce it's 12th installation at a major US race track of the VIP Race Graphics system. This exciting new innovation allows individual tracks to display customized graphics on all display media including large video LED tote-screens and LCD displays.

The VIP Race Graphics system is an easy to use system that offers quality graphics within a simple, user-friendly environment. It is a real-time, multi-screen system that offers professional graphics while providing additional features not available in other standard graphic packages and increasing operational efficiency, enabling operators to handle additional responsibilities.

The system offers racetracks the ability to develop graphics and animated video "bugs" to present more appealing display, which can be updated or altered in real time.

Complete with templates and scripts, and easy to learn for novice users, the VIP Race Graphics system is still robust and flexible enough to support the demands of highly experienced operators and advanced users who require the ability to create customized complex graphics.

TelePhoto has brought integrity to the Canadian horseracing industry as the sole provider to the country's national regulatory agencies. Through its exclusive long-term contracts, TelePhoto has produced over 2 million live horse racing productions.

TelePhoto continues to redefine the finish line for the North American racing industry.
