TelePhoto Technologies - Better, Faster, Cheaper

Even after providing television production for the North American Racing Industry since the inception of television, TelePhoto Technologies Inc. has never rested on its past successes. TelePhoto has never stopped innovating and developing forward thinking solutions. This makes TelePhoto the North American standard in using technology to support and enhance the sport and business of horse racing. Through its Continuous Improvement Program and focus on doing things better, faster and more cost effectively, TelePhoto has developed a virtual OTB-in-a-Box which simplifies the process of setting up off-track wagering sites with an innovative signal delivery system — while saving tracks money at the same time.

OTB-in-a-Box

OTB-in-a-Box has been developed for one main purpose: to decrease your costs and increase your Handle in a way that has never been possible before. TelePhoto uses new proprietary technology and our own secure private international content delivery network to deliver track signals to off-track wagering locations. TelePhoto delivers your OTB signals for a fraction of the cost of our competitors. We will monitor and route signals to your CCTV distribution system as your schedule dictates.

Features

- Internet-based redundant signal deliver with real-time monitoring.
- 24/7/365 customer support through a toll free service line.
- Quick, easy management and control of track signals.
- Centralized control of multiple signals — if a signal goes down, it will be re-routed to your OTB in seconds.

Benefits

- Reduce your costs – possible to save 50% over traditional satellite technology.
- Increase your Handle.
- Ensure quality control and uptime of signals.
- Accurate, timely switching of track signal according to your schedule.

To learn more about OTB-in-a-Box call your TelePhoto sales representative.
