

Timing that is Second to None

TelePhoto Technologies - Setting the Pace

TelePhoto's timing system has an unrivalled history of reliability. The system is engineered to require minimal maintenance and will seamlessly integrate with existing production or display equipment.

Contempo Timer

TelePhoto provides accurate incremental and running times on stand alone, in-field displays visible in virtually all lighting conditions. The high quality timer output can directly feed the television graphics. The system provides reliable and accurate data for on and off-track record-keeping and statistics.

Features

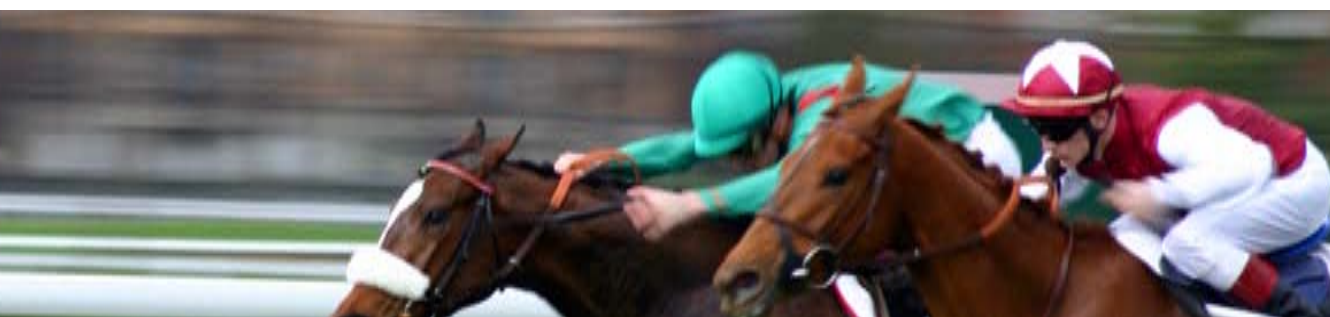

- Extremely accurate timing results are instantly delivered.
- Easy-to-use interface.
- Smart programming built-in for all horse breed requirements.
- Built in fail-safes with manual override capability.
- Built-in system test sequence.
- Interfaces with existing graphics packages.
- Ability to input and display Minutes to Post (MTP) in the field.

Benefits

- Easy-to-use with minimal training required.
- Low maintenance system built on robust technology that works in all climates and weather conditions.
- Manual input of timing ensures security of race timing.
- Low margin of error.
- Interfaces seamlessly with the VIP Race graphics system, a leading graphics package.
- Knowing the MTP helps horsemen manage and optimize their pre-race warm-up.
