

TelePhoto Technologies – Breaking away from the pack

In today's fast paced world, information services can be accessed instantly. People no longer tolerate any delays in accessing information or getting answers to their questions.

TelePhoto Technology's Video Replay service has been designed specifically to meet the needs and expectations of today's racing officials and commissions. By expediting queries and complaints in a timely and efficient manner, TelePhoto provides improved customer service and ensures tracks are meeting the expectations of their customers.

Video Replay

With today's fast pace demands, racing officials expect immediate access to the resources they require. Waiting days for a physical copy of a race video is unacceptable. Using TelePhoto's "Video Replay, Racing on your Desktop," officials can easily view any race replay, including the official Photo Finish, via a private Internet connection as soon as the following morning

Broadcasts will be segmented into individual races with the Photo Finish attached, as well as any inquiries and objections flagged. Race segments are transmitted via FTP overnight. The Viewer will be able to access each available race on a simple user-friendly webpage interface the following morning. Races and final results can be viewed from any computer connected to the public internet.

Features

- Digital content stored electronically.
- Track specific information stored on a secure web site.
- Access to content via a simple, easy-to-use, but secure web portal interface

Benefits

- Races available for viewing online within 24 hours.
- Races are organized for easy and efficient access.
- Secure web portal access, anywhere, any time.
- Enables training to take place in the field by showing past decisions.
