

*The latest in Track emergency warning systems*

## **TelePhoto Technologies - Making a positive difference in racing**

Since 1950, TelePhoto has been providing innovative services to support the horse racing in North America – eLight continues this tradition. eLight safeguards riders and horses by flashing warning lights to alert riders of hazards. This enables riders to take evasive or corrective action to avoid problems and prevent accidents.

### **eLight**

The eLight System, your complete emergency warning system – there's nothing else to buy! This easy to use and install system is designed to provide an advance warning system for drivers, enabling them to adjust their course accordingly.

The fully wireless and battery operated eLight system includes a 3" X 5" high intensity LED light mounted in a 12" X 12" box operated by one remote control transmitter.

Mounting of the boxes will vary from location to location. TelePhoto's experience in installing eLight systems indicates that timer field display units, light standards and free standing poles are optimum mounting positions for most tracks.

For optimum mounting, it is important that the position be unobstructed from the remote control area in order to ensure that the system can be properly and promptly activated.

The functionality of the system, activation and de-activation is controlled entirely by 2.4 Ghz frequency remote control that does not require a license to operate.

### **Features**

- Totally wireless from the track to the grandstand.
- Remote Controlled.
- Battery operated with battery rechargeable by solar or AC.
- 12 inch square mountable warning light system that mounts almost anywhere.
- High intensity LED lights for increased visibility even on the brightest days.
- Long Range antennas tested for ½ and ¾ mile tracks.

### **Benefits**

- Highly visible.
- Easy to install and use.
- Instant activation.
- Requires no wires.
- Operates even during power outages.
- Affordable — a complete system with nothing else to buy!
